TRANSFORMATIVE SCIENCE EDUCATION

FUTURE-PROOF FOR KNOWLEDGE ECONOMY

Chart your pathway

Embrace lifelong learning

Empower your learning
Distinguished Record

NUS is one of the prime movers in shaping Singapore’s scientific landscape in education and research.

- More than 85 years of experience in providing quality science education
- One of the largest faculties in NUS with six departments: Biological Sciences, Chemistry, Mathematics, Pharmacy, Physics, and Statistics and Applied Probability
- One of the best universities in the world for science education
- Ranked by Quacquarelli Symonds as the top university in Asia for many science subjects

Global Outlook

Study abroad programmes open the door to a global learning experience, broadening students’ intellectual and global outlook.

- More than 700 students gained overseas experience in Academic Year 2017/2018
- Collaborations with over 200 partner universities expose students to different cultures and academic environments

Holistic Learning

Students will experience an enriching educational journey, both in and outside the classroom.

- Home to about 5,000 undergraduates and 1,300 postgraduate students
- Opportunities to engage award-winning professors in cutting-edge research
- Vibrant campus and student life

Diverse Learning Choices

Students have the flexibility to plan learning pathways based on interests and career aspirations.

- 11 primary majors, seven second majors, 14 minors, several concurrent degree programmes as well as double major, double degree, joint degree, multidisciplinary and cross-faculty programmes
- Enhancement programmes to broaden students’ academic horizons, like undergraduate research programmes, local and overseas internships, and inter- and multidisciplinary boutique programmes in Mathematics and Science

Bright Career Prospects

Our graduates are employed in various high-growth and high-impact industries.

- Career opportunities for graduates in key industries that drive Singapore’s economic growth, such as biomedical sciences, consumer businesses, data analytics, education, financial services, healthcare, infocommunication technologies, safety and security, research and development, and urban solutions and sustainability
- Training in specialised domain knowledge and life skills such as critical thinking, problem-solving and interpersonal skills, which enhance employability and career mobility
The Faculty of Science continues to increase our suite of academic programmes to provide students with the breadth and depth of educational training to face an increasingly complex future and to be prepared for careers in today’s globalised workplace.

**B.Sc. (Hons) in Pharmaceutical Science**
The B.Sc. (Hons) in Pharmaceutical Science programme is offered from Academic Year 2018/2019. It equips students with a deep understanding of the drug discovery and development process, complemented with strong foundational knowledge of the regulatory and commercial environment (see page 10).

**Joint Degree Programme with University of Dundee**
The four-year Joint Degree Programme combining NUS’ B.Sc. (Hons) in Life Sciences and University of Dundee (UoD)’s B.Sc. (Hons) in Biological Sciences/Biomedical Sciences will equip students with drug discovery and design expertise. The first batch of students was admitted in Academic Year 2018/2019.

The first of its kind joint Honours programme enables NUS Life Sciences students to complete a full-year research project at UoD in drug discovery and design. Students will also gain hands-on training in drug optimisation and design, by leveraging UoD’s partnerships with leading pharmaceutical and biotechnology companies in the fight against diseases (see page 6).

**Concurrent Degree Programme with The University of Melbourne Doctor of Veterinary Medicine**
From Academic Year 2018/2019, students can opt for a new Concurrent Degree Programme (CDP) combining NUS’ B.Sc. in Life Sciences and the Doctor of Veterinary Medicine offered by the Faculty of Veterinary and Agricultural Sciences, The University of Melbourne. The CDP integrates the two degree programmes so that it is possible to accelerate and complete the programme in 5.5 years.

Students will acquire specialised theoretical, practical and clinical training in veterinary medicine, which deals with the prevention, diagnosis and treatment of disease in animals, as well as veterinary science, which deals with the health and well-being of animals (see page 6).

**Specialisation in Quantum Technologies**
A new Specialisation in Quantum Technologies, an undergraduate specialisation that is unique worldwide, will be offered to existing Physics Majors from Academic Year 2019/2020. The specialisation introduces students to the array of quantum technologies and equips them with knowledge and skills for careers in the fast-growing field of quantum technologies in academic institutions, industries and defence (see page 11).
RESEARCH OPPORTUNITIES
FOR STUDENTS

Overview
The Faculty of Science is home to different clusters of research excellence, both in fundamental research to create knowledge, and applied research to spur innovation.

Apart from the final year project which you are required to, or may undertake during your Honours year, we have various research programmes which offer you opportunities to pursue independent research projects.

Through these programmes, you will develop valuable research skills, cultivate critical thinking and problem-solving skills, as well as sharpen communication and presentation skills. Some of these programmes are:

- **Undergraduate Research Opportunities Programme in Science (UROPS):** 2nd or 3rd year undergraduate students can experience scientific research and discovery by participating in research projects (see page 17).

- **Special Programme in Science (SPS):** Students can undertake an integrative research project in a team on areas of contemporary science to understand an interdisciplinary approach to science (see page 16).

- **Overseas Summer Research Programme:** Students go abroad to conduct research in the laboratories of partner universities during the NUS vacation period (see page 18).

The new Data Analytics Consulting Centre has a programme where students can be involved in consulting projects with industry. Under this programme, students prepare themselves for a career in data science by learning how to handle complex datasets and solve real-world problems.

Research Institutes and Centres
You may also have opportunities to participate in the research work of some of the research institutes and centres in NUS. These include:

- Centre for Advanced 2D Materials
- Centre for BioImaging Sciences
- Centre for Ion Beam Applications
- Centre for Quantitative Finance
- Centre for Quantum Technologies
- Centre for Wavelets, Approximation and Information Processing
- Chemical, Molecular and Materials Analysis Centre
- Data Analytics Consulting Centre
- Institute for Mathematical Sciences
- Institute of Data Science
- Life Sciences Institute
- Mechanobiology Institute
- NUS Environmental Research Institute
- NUS Nanoscience and Nanotechnology Initiative
- Protein and Proteomics Centre
- Risk Management Institute
- Singapore Centre on Environmental Life Sciences Engineering
- Singapore Synchrotron Light Source
- Solar Energy Research Institute of Singapore
- Tropical Marine Science Institute

Research Areas within Faculty of Science

**BIOLOGICAL SCIENCES**

- **Molecular Cell and Developmental Biology:** Agro and Aqua Biology; Disease Models (Plant and Animal); Infection Science; Molecular and Cellular Dynamics; Protein Dynamics and Drug Design
- **Biophysical Sciences:** Bioimaging Sciences; Computational Biology; Mechanobiology; Protein Science and Proteomics; Structural Biology
- **Ecology, Evolution and Biodiversity:** Animal Behaviour; Community Ecology; Conservation Biology; Darwin and Wallace; Environmental Biology; Systematics, Phylogeny and Biogeography Systematics
CHEMISTRY

• **Advanced Materials:** Two-Dimensional (2D) Materials; Energy Materials; Graphene and Nanocarbons; Luminescent Biomarkers; Nanomaterials; Organic Optoelectronic Materials

• **Organic Chemistry:** Asymmetric Synthesis; Organic Catalysis; Transition Metal Catalysis

• **Chemical Biology and Medicinal Chemistry:** Development of Therapeutic Agents; Synthesis of Bioactive Molecules; Synthetic Biology

• **Computational Chemistry and Simulation:** Molecular Dynamics; Nanoscale Modelling

• **Environmental Chemistry:** Carbon Dioxide Fixation; Green Chemistry; Sensors; Water Eco-Efficiency

FOOD SCIENCE AND TECHNOLOGY PROGRAMME

Food Chemistry and Analysis; Food Microbiology and Safety; Food Processing and Engineering; Human Nutrition; Functional Food; Food Fermentation; Flavour and Sensory Science; Food Preference and Consumer Studies

LEE KONG CHIAN NATURAL HISTORY MUSEUM

• **Biodiversity Research:** Species Discovery with Next-Generation Sequencing; Environmental DNA; Taxonomy; Systematics; Conservation of Southeast Asia's Fauna

MATHEMATICS

• **Pure Mathematics:** Algebra and Number Theory; Combinatorics and Graph Theory; Dynamical Systems; Geometry and Topology; Mathematical Logic and Theoretical Computer Science; Partial Differential Equations and Geometric Analysis; Probability; Real, Functional and Harmonic Analysis; Representation Theory and Automorphic Forms

• **Applied and Computational Mathematics:** Computational Biology and Bioinformatics; Data Science; Imaging and Vision Science; Mathematical Finance and Mathematical Economics; Numerical Analysis and Scientific Computing; Optimisation

PHARMACY

• **Drug Discovery and Design:** Computational Modelling and Informatics; Natural Products and Traditional Chinese Medicine; Rational Drug Discovery

• **Health Services Research:** Clinical Pharmacy and Pharmacy Practice; Disease Control and Management; Pharmacoeconomics

• **Pharmaceutical Biology and Drug Disposition:** Disease Etiology, Biomarkers and Targets; Pharmacokinetics and Pharmacodynamics

• **Pharmaceutical Technology and Innovative Therapeutics:** Formulation and Processing; Innovative Nano-Therapeutics; Smart Drug Delivery and Novel Biosystems

PHYSICS

• **Advanced Materials:** 2D Materials; Nanostructures and Energy; Organic Semiconductors; Oxides; Spectroscopies; Nonlinear Optics; Surface Science

• **Biological and Soft Matter Physics:** Biopolymers; Mechanics of Biomolecules; Single-Molecule Manipulation and Imaging

• **Ion Beam Science and Technology:** Proton Beam Writing; Proton Microscopy; Radiobiology

• **Theoretical and Computational Physics:** Astrophysics and Cosmology; Condensed Matter Physics; Electromagnetics and Acoustics; Quantum Control; NonLinear Dynamics and Complex Systems; String Theory

• **Quantum Information Technologies:** Cold Atoms and Molecules; Atom and Ion Trapping; Cryptography; Quantum Entanglement and Information Theory; Quantum Optics and Atom-Photon Interaction

STATISTICS AND APPLIED PROBABILITY

• **Applications:** Ageing Population; Biostatistics; Clinical Trials; Computational Biology; Environmental Statistics; Epidemiology; Eye Disease Modelling; Financial and Business Statistics; Genetics and Genomics; Infectious Disease Modelling; Medical Diagnostic Imaging; Networks; Neural Science; Nutritional Science; Pharmaceutical Data; Psychiatry Data

• **Statistical Methodology and Probability Theory:** Artificial Intelligence; Bayesian Inference; Big Data; Classification; Change Point; Computational Statistics; Deep Learning; Dimension Reduction; Distributional Approximation; Empirical Likelihood; Functional Data Analysis; High Dimensional Data Analysis; Longitudinal and Panel Data Analysis; Machine Learning; Manifold and Non-Euclidean Data; Monte-Carlo Methods; Prediction and Forecasting; Random Matrix; Smoothing Methods and Nonparametric Statistics; Spatial Data Analysis; Sequential Analysis; Stein’s Methods; Survival Analysis; Variable Selection and Screening

For the latest research news, please visit: www.science.nus.edu.sg/research/research-news.
Undergraduate Programmes

B.SC. (HONS) AND B.SC. IN LIFE SCIENCES
This undergraduate course in biological and biomedical sciences provides foundational knowledge vital to all areas of life sciences in the first year of study. Selection of relevant advanced-level modules paves the way to one of three specialisations and the many diverse disciplines in life sciences.

Honours students can either pursue a general Honours degree or one of these specialisations:

- **Biomedical Science**: This focuses on human health and diseases, and its goal of clinical solutions.
- **Molecular and Cell Biology**: This emphasises the fundamental physical, chemical and biological mechanisms of living organisms.
- **Environmental Biology**: This affirms the importance and relevance of biodiversity and ecology, and their applications towards evolutionary understanding and environmental conservation.

NEW! Joint Degree Programme (JDP) NUS B.SC. (HONS) IN LIFE SCIENCES WITH UNIVERSITY OF DUNDEE B.SC. (HONS) IN BIOLOGICAL SCIENCES/BIOMEDICAL SCIENCES
This focuses on drug discovery and development and includes the unique arrangement for the final Honours year and research project to be conducted in the partner university.

For information on the department’s Second Major and Minor courses, please refer to “Admissions Information”.

Graduate Programmes

M.SC./PH.D. BY RESEARCH
Possible research areas include: Biophysical Sciences; Cell, Molecular and Developmental Biology; and Ecology and Evolutionary Biology.

NEW! Concurrent Degree Programme (CDP) NUS B.SC. IN LIFE SCIENCES WITH THE UNIVERSITY OF MELBOURNE DOCTOR OF VETERINARY MEDICINE
This allows students to embark on graduate studies in veterinary medicine concurrently while on a study abroad programme.

The CDP integrates the two degree programmes so that it is possible to accelerate and complete both in 5.5 years.
Undergraduate Programmes

B.SC. (HONS) AND B.SC. IN CHEMISTRY
NUS’ B.Sc. (Hons) in Chemistry programme is accredited by the Royal Society of Chemistry.

In Years 1 and 2, you will focus on the fundamental principles and applications of chemistry, divided into Inorganic, Organic and Physical Chemistry.

Honours students can either pursue a general Honours degree or one of these specialisations:
• Materials Chemistry: This covers the synthesis, characterisations and applications of polymers, inorganic and organic solids and devices.
• Medicinal Chemistry: This covers the design and synthesis of compounds as potential drugs, the identification of their functional groups and interactions with targets, as well as the methods used to assay the compounds.
• Environment and Energy: This covers the techniques used for environmental sampling and analysis, the chemistry and physics of energy generation and conversion processes, and their impact on energy policies.

DOUBLE MAJOR IN CHEMISTRY AND FOOD SCIENCE
(Jointly offered with the Food Science and Technology Programme)
You will gain understanding on aspects of food beyond its physical and chemical properties, in this direct admission course.

For information on the department’s Second Major and Minor courses, please refer to “Admissions Information”.

Graduate Programmes

M.SC./PH.D. BY RESEARCH
Possible research areas include: Analytical Sciences; Catalysis; Computation, Modelling and Spectroscopy; Food Science and Technology; Inorganic and Organic Chemistry; Materials Science; Medicinal Chemistry; Chemical Biology; and Surface Science.

M.SC. IN CHEMISTRY FOR ENERGY AND ENVIRONMENT BY COURSEWORK
You will acquire knowledge of the latest energy and environmental technologies, and modern materials design, synthesis strategies, advanced characterisation and analytical techniques.

M.SC. IN CHEMISTRY BY COURSEWORK
This four-year programme provides a broad scientific foundation in chemistry for advanced positions in the chemical industries and advanced degree programmes such as the Ph.D. in Chemistry.

JOINT M.SC. IN INDUSTRIAL CHEMISTRY BY COURSEWORK
(Jointly offered with the Technical University of Munich)
You will gain specialised knowledge in selected areas of technology in the pharmaceutical and chemical industries.

Possible Careers
Chemical scientist
Educator
Forensic scientist
Materials scientist
Patent specialist
Quality control scientist
Researcher
Water treatment scientist

Examples of Industries/Sectors
Biochemicals
Chemicals
Education
Energy
Engineering
Government agencies
Manufacturing
Pharmaceuticals
Research and development
Specialty chemicals
Undergraduate Programmes

B.SC. (HONS) AND B.SC. IN FOOD SCIENCE AND TECHNOLOGY

This boutique programme covers the full educational spectrum in food science and technology, with emphasis on four themes: Food Quality and Safety; New Food Product Innovation; Food Processing; and Nutrition.

It is the only International Union of Food Science and Technology (IUFoST) accredited degree in Singapore, certified by IUFoST for meeting international standards and guidelines.

All undergraduates are guaranteed entry into the Professional Placement Programme, which enables you to put learning into practice through workplace experience.

DOUBLE MAJOR IN CHEMISTRY AND FOOD SCIENCE
(Jointly offered with the primary Major in Chemistry)

You will gain understanding on important aspects of food beyond its physical and chemical properties, in this direct admission course.

For information on the programme's Second Major and Minor courses, please refer to “Admissions Information”.

Graduate Programmes

M.SC. IN FOOD SCIENCE AND HUMAN NUTRITION BY COURSEWORK

This covers advanced topics including Food Bioscience (Microbiology and Safety, Fermentation); Evidence-based Functional Foods; Human Nutrition; Modern Analytical Science; and Modern Food Processing Technology.

M.SC./PH.D. IN FOOD SCIENCE AND TECHNOLOGY BY RESEARCH

Possible research areas include: Food Biotechnology; Food Chemistry and Analysis; Food Microbiology and Safety; Food Processing and Engineering; and Human Nutrition.
Undergraduate Programmes

B.SC. (HONS) AND B.SC. IN MATHEMATICS
You will learn fundamental mathematical concepts in areas including Algebra; Differential Equations; Geometry and Topology; Logic; Number Theory and Combinatorics; and Real and Complex Analysis, with a focus on mathematical foundations and fundamental techniques.

B.SC. (HONS) AND B.SC. IN APPLIED MATHEMATICS
You will study mathematical methods and problem-solving techniques that are applied in science, engineering and computer science.

Honours students can either pursue a general Honours degree or one of these specialisations:
- Operations Research and Financial Mathematics: This covers the application of analytical methods and mathematical models to solve problems in areas like industrial engineering, operations management and finance.
- Mathematical Modelling and Data Analytics: This covers the use of mathematical models and numerical analysis to manage and analyse massive datasets.

B.SC. (HONS) AND B.SC. IN QUANTITATIVE FINANCE
This multidisciplinary course covers mathematical theory and applications, statistical tools, computing theory and techniques, financial theory and principles, and core financial products.

SPECIAL PROGRAMME IN MATHEMATICS
This specially designed programme for selected students with a strong passion and aptitude for mathematical sciences comprises modules in foundational mathematics. This prepares you for graduate programmes and careers in the mathematical sciences.

For information on the department’s Second Major and Minor courses, please refer to “Admissions Information”.

Graduate Programmes

M.SC. IN MATHEMATICS BY COURSEWORK
This programme for mathematics teachers and professionals enables them to upgrade their professional skills and qualifications through advanced training.

M.SC. IN QUANTITATIVE FINANCE BY COURSEWORK
This programme, jointly offered by the Department of Mathematics and the Department of Statistics and Applied Probability, with the Department of Economics in the Faculty of Arts and Social Sciences, equips you with advanced knowledge in quantitative finance, and its use in the financial industry.

M.SC./PH.D. BY RESEARCH
Possible research areas include: Pure Mathematics; Applied Mathematics; and Financial Mathematics.

Possible Careers

Actuary
Computer programmer
Cryptanalyst
Data analyst
Educator
Financial analyst
Financial engineer
Fund manager
Quantitative modelling analyst
Researcher
Risk management analyst
Software engineer

Examples of Industries/Sectors

Education
Financial services
Government agencies
Healthcare
Infocommunication technologies
Insurance
Operations management
Research and development
Safety and security
Transportation
Wealth management
Undergraduate Programmes

NEW! B.SC. (HONS) IN PHARMACEUTICAL SCIENCE
This four-year programme focuses on the pharmaceutical sciences, culminating in an understanding of drug discovery and development, as well as the regulatory and commercial environment in pharmaceutical industries.

B.SC. (HONS) AND B.SC. IN PHARMACY
Our flagship four-year professional programme grooms future healthcare professionals, and educates students in all aspects of medicine and its use in disease management.

This multidisciplinary programme provides foundational knowledge in basic pharmaceutical sciences dovetailing towards patient and disease management, health promotion and professional pharmacy skills development.

It is the only degree in Singapore recognised for onward registration with the Singapore Pharmacy Council for licensed pharmacists.

For information on the department’s Minor courses, please refer to “Admissions Information”.

Graduate Programmes

M.SC. (PHARMACEUTICAL SCIENCES AND TECHNOLOGY) BY COURSEWORK
This part-time programme is designed for those who are already working in, or aspiring to enter the pharmaceutical industry.

You will acquire in-depth knowledge and practical skills for the formulation and process manufacturing of chemical and biological drugs into a range of dosage forms, and gain understanding of the regulatory and quality compliance of pharmaceuticals in the process of drug development and manufacturing.

M.SC./PH.D. BY RESEARCH
This programme is suitable for students with a good basic degree in science, engineering or health-related disciplines who wish to enhance competencies in conducting independent research in a specialised area relevant to pharmaceutical sciences, for a career in academia, research or management.

PHARM.D. (DOCTOR OF PHARMACY) BY COURSEWORK AND CLINICAL CLERKSHIP
This two-year full-time programme, comprising both didactic and clerkship components, is designed to equip pharmacists with additional clinical knowledge, as well as clinical skills and attitudes to deliver high quality and safe medication therapies to patients in collaboration with other health professionals.

It builds on the undergraduate programme foundations and focuses on pharmacotherapy topics in greater depth, broadening your clinical pharmacy knowledge and patient care skills.

This programme contributes to the development of Specialist Clinical Pharmacists in Singapore.
Undergraduate Programmes

B.SC. (HONS) AND B.SC. IN PHYSICS
You will learn theoretical and experimental skills for solving complex problems, by studying Classical and Quantum Mechanics; Electromagnetism; Thermodynamics; Atomic and Nuclear Physics; Nanophysics; and Relativity.

Honours students can either pursue a general Honours degree or one of these specialisations:

- **Astrophysics**: This focuses on celestial physics and cosmology, and is suitable for students aspiring to be physics teachers.
- **Nanophysics**: This focuses on the scientific principles behind the technological and industrial developments of nanoscale materials with advanced functionalities.

- **NEW! Quantum Technologies**: This focuses on the foundations of quantum mechanics and its application to sensing, communication, computation and cryptography.

For information on the department’s Second Major and Minor courses, please refer to “Admissions Information”.

Graduate Programmes

**M.SC. BY COURSEWORK**
This programme leads to an M.Sc. degree in either physics or applied physics, enabling educators and professionals to further upgrade their professional skills and qualifications.

Applied physics focuses on advanced training in areas such as semiconductor manufacturing, photonics and biophysics. It is suitable for physics graduates and professionals who wish to upgrade their professional skills and qualifications, or to switch to the high technology industry.

**M.SC./PH.D. BY RESEARCH**
Possible research areas include: Acoustics and Computer Simulations; Astrophysics; Atomic Physics; Condensed Matter Physics; High Energy Physics; Infrared Spectroscopy; Ionics; Ion Beam Applications; Laser Optics; Materials Science; Optics; Quantum Technologies; Solid-State X-Ray Fluorescence; Superconductors; and Surface Physics.

Possible Careers

Analyst
Computer architecture designer
Educator
Engineer
Geophysicist
Industrial design planner
Instrumentation specialist
Medical and radiation physicist
Medical technologist
Meteorologist
Researcher

Examples of Industries/Sectors

Defence
Education
Engineering
Government agencies
Healthcare
Infocommunication technologies
Microelectronics
Physical sciences
Research and development
Scientific services
Semiconductors
Undergraduate Programmes

B.SC. (HONS) AND B.SC. IN STATISTICS
You will learn about the scientific application of mathematical principles to the collection, analysis and presentation of data, to gain insights from data which enable sound conclusions.

Honours students can either pursue a general Honours degree or one of these specialisations:
- **Data Science**: This covers computing concepts and skills, enabling you to manage the collection, storage and analysis of large amounts of data in virtually every field.
- **Finance and Business Statistics**: This covers the application of statistics to the areas of investment and financial analysis, insurance, marketing research and management.

For information on the department’s Second Major and Minor courses, please refer to “Admissions Information”.

Graduate Programmes

M.SC. IN STATISTICS BY COURSEWORK
This is designed for students from statistics, mathematics or related fields.

You will acquire practical skills to solve real-world industry problems and knowledge of statistical principles and methods required in the application of statistics.

M.SC. IN STATISTICS BY RESEARCH
You will acquire advanced knowledge of theoretical and applied statistics.

Possible research areas include: Biostatistics; Computational Statistics; Financial Statistics; High Dimensional Data Analysis; and Probability Theory and Applications.

PH.D. IN STATISTICS BY RESEARCH
You will acquire skills to produce high-quality statistical research, for careers in research and development, and academia.

Possible research areas include: Bayesian Inference; Biostatistics; Functional Data Analysis; High Dimensional Data Analysis; and Probability Theory and Applications.
The **B.Sc. (Hons) in Data Science and Analytics** is a four-year direct Honours programme jointly offered by the Department of Statistics and Applied Probability, and the Department of Mathematics, in conjunction with the Department of Computer Science in the School of Computing.

It equips you with the ability to develop novel analytical tools to address data-driven problems in businesses and new scientific applications.

In this interdisciplinary programme, you will read modules in mathematics, statistics and computer science, and be exposed to the interplay among these three key areas in the practice of data science.

In Years 3 and 4, you will delve in-depth into analytics methods such as artificial intelligence; computation and optimisation; computer algorithms; database and data processing; data mining and machine learning; and high dimensional statistics; as well as applications of analytics to various domains.

**Programme highlights**

- **Capstone module**: The industry-driven module enables you to work on research and projects that are related to real-life data and workplace challenges.

- **NUS Co-Operative Education Programme**: You may gain extensive workplace experience by spending 18 months (five consecutive semesters and terms) with reputable employers.

This programme will enhance your employability upon graduation for careers in diverse industries and businesses that require insights from Big Data, enabling them to be smarter, more productive and more competitive.

**SECOND MAJOR IN DATA ANALYTICS**

This programme enables you to apply computing and statistical methods to analyse and model complex data in your respective domains.

**Possible Careers**

- Actuary
- Artificial intelligence specialist
- Big Data analyst
- Biostatistician
- Business analytics specialist
- Consumer insights analyst
- Data analytics specialist
- Data scientist
- Educator
- Machine learning scientist
- Statistician

**Examples of Industries/Sectors**

- Biomedical sciences
- Consumer businesses
- Education
- Financial services
- Government agencies
- Healthcare
- Infocommunication technologies
- Insurance
- Manufacturing
- Pharmaceuticals
- Research and development
- Safety and security
- Telecommunications
- Transportation

**DATA SCIENCE AND ANALYTICS PROGRAMME**
Undergraduate Programme

The B.Sc. (Hons) in Computational Biology is a four-year multidisciplinary programme focusing on computer-based analysis of biological problems, the fastest growing area of the life sciences.

The programme is suitable for students with a keen interest in mathematics, computing and life sciences.

It also provides excellent research opportunities and mentorship. Students are often mentored by two professors from different faculties.

In Years 1 and 2, you will learn about the foundations of university-level life sciences, mathematics and statistics, and computer science; how to develop, apply and interpret algorithms to biology; and how to reason analytically about biological problems.

In Years 3 and 4, you can focus on your interests, culminating with a two-semester final year research project.

Key specialisation topics

- Big Data analysis of next-generation DNA and RNA sequencing
- Modelling of biological systems
  - Computational genomics
  - Computational neuroscience
  - Computer-aided drug design
- Theoretical foundations and analysis of genes/proteins
- Biological and pharmaceutical databases

You will acquire broadly applicable skills in modern biological sciences, mathematical and statistical analysis, as well as computer science.

Possible Careers

Bioinformatician
Clinical bioinformatics data scientist
Computational microbiologist
Computational modeller
Computational scientist
Gaming specialist
Project scientist
Researcher
Software developer
Technology analyst

Examples of Industries/Sectors

Biotechnology
Government agencies
Healthcare
Infocommunication technologies
Pharmaceuticals
Research and development
Scientific services

Undergraduate Programme

The Bachelor of Environmental Studies is a four-year direct Honours programme jointly hosted by the Faculty of Science and the Faculty of Arts and Social Sciences, with participation from the Faculty of Engineering, the Faculty of Law, School of Design and Environment, NUS Business School, Yong Loo Lin School of Medicine, the Saw Swee Hock School of Public Health, and the Lee Kuan Yew School of Public Policy.

It adopts an interdisciplinary approach in addressing complex, modern environmental issues such as climate change, land use, water usage, alternative energy and the building of liveable high-density cities.

The programme includes a two-year broad-based curriculum where you read core modules in biology, chemistry, economics, geography, law, management, mathematics, policy, public health and statistics.

Students can specialise in either Environmental Biology or Environmental Geography:

Environmental Biology: This includes modules in Behavioural Biology; Biodiversity; Evolution; Field Studies; Freshwater and Terrestrial Ecology; Marine Biology; and Physiology.

Environmental Geography: This includes modules in Climate; Economics; Environmental Management; Geography; Geographical Information Systems; Geosciences; Modelling; and Sustainability.

Three capstone modules

• ENV3101 and ENV3102: Environmental Challenges: Asian Case Studies: These two interconnected modules include an extended field trip to one of the countries in the Asia region in ENV3102, where you can experience firsthand the issues you studied in ENV3101.

• ENV4101: Environmental Management in Singapore: This is a town-hall style series where you can discuss a range of professional topics with environmental experts. These roundtable discussions provide an opportunity to learn about the ins and outs of these fields.

Programme highlights

Specially designed integrated modules emphasise small-group discussions, case studies, fireside chats and guest lectures with environmental luminaries, policymakers and government officials.

You can participate in undergraduate research, as well as internships with environmental agencies, natural resource management agencies and environmental research centres/institutes, which provide you practical exposure at the workplace.

You can also go on study abroad programmes, which provide you a global learning experience.

Real-world and real-time field studies to understand selected environmental challenges facing Asia.

Possible Careers

Conservation biologist
Ecologist
Educator
Environmental consultant
Environmental health officer
Environment impact assessor
Environmental quality specialist
Environmental sustainability specialist
Environmental technologist
Forest conservationist
Park manager
Public policy analyst
Researcher
Wildlife biologist

Examples of Industries/Sectors

Ecotourism
Education
Environmental consultancy
Environmental management
Environmental planning
Government agencies
Natural resource management
Research and development
Sustainable development

In addition to the diversity of courses and the rigorous training provided by our basic degree programmes, the Faculty of Science also offers a host of special programmes to broaden students’ intellectual and personal horizons.

**NUS Pre-Medical Programme (PMP)**
The programme prepares a select group of students for the unique opportunity of joining the Doctor of Medicine programme at Duke-NUS Medical School or graduate programmes in Biomedical Science, upon successful completion of their undergraduate degrees and the requirements of the PMP.

Years 1 and 2 undergraduate students from the Faculty of Science may apply to read GMS1000: The Duke-NUS Pre-Medical Module in Semester 2 or in the Special Term. Applicants will undergo a pre-selection process where you are assessed based on your academic potential, achievements and aptitude for a medicine course.

Shortlisted students will take GMS1000, a semester-long module taught by Duke-NUS Medical School postdoctoral fellows. Throughout the course, your performance will be assessed and a few will be selected as NUS Pre-Med Scholars.

Scholars will participate in medical shadowing and research internships as well as regular seminars and talks.

*For more information on the PMP, please visit [www.science.nus.edu.sg/education/undergraduate/ug-programmes/pre-med](http://www.science.nus.edu.sg/education/undergraduate/ug-programmes/pre-med). You can also email your enquiries to askscience@nus.edu.sg.*

**Special Programme in Science (SPS)**
The programme prepares students with an aptitude for science to address modern multidisciplinary scientific challenges.

It fosters creative and critical thinking through scientific investigations and in-depth studies, as well as mentorship by senior SPS students, graduate students, instructors and professors.

The Integrated Science Curriculum comprises four specially-designed thematic modules that integrate biology, chemistry, mathematics and physics, and two research-oriented modules.

Admission is selective. Prospective students are interviewed to determine your passion in science and intellectual maturity.

*For more information on SPS, please visit [http://sps.nus.edu.sg](http://sps.nus.edu.sg). You can also email your enquiries to admin@sps.nus.edu.sg.*

**Internships**
You will have multiple opportunities during your candidature to take up internships at renowned local and international organisations, through the Undergraduate Professional Internship Programme (UPIP) and Honours year Applied Project modules.

These programmes provide experiential learning on-the-job. You will get to:

- **Gain practical workplace experience**: Acquire transferable skills, such as resourcefulness, problem-solving, response-abilities and teamwork, which are important attributes at the workplace.

- **Plan your academic and career development**: Better understand your interests, enabling you to develop your career plans and select elective coursework that integrates your studies and career goals.
• **Translate scientific principles:** Become adept in applying classroom learning to solve problems in a real-world professional environment.

Upon successful completion of the internship, you will also be awarded modular credits that count towards your graduation requirement.

*For more information on UPIP, please visit [www.science.nus.edu.sg/students/upip](http://www.science.nus.edu.sg/students/upip). You can also email your enquiries to sciupip@nus.edu.sg.*

**Undergraduate Research Opportunities Programme in Science (UROPS)**
The programme provides you a unique opportunity to work with our faculty members and experience the challenges and benefits of undertaking an independent research project.

You will get to work at the frontiers of scientific research through close interaction with established scientists in their fields.

You will enhance your knowledge in the latest developments in science and technology, and acquire communication and presentation skills.

You can choose to take up a UROPS project during regular semesters or special terms (May to July).

*For more information on UROPS, please visit [www.science.nus.edu.sg/undergraduate-studies/ugenh/urops-main](http://www.science.nus.edu.sg/undergraduate-studies/ugenh/urops-main). You can also email your enquiries to scienhance@nus.edu.sg.*

**University Scholars Programme (USP)**
This multi- and interdisciplinary academic programme shapes independent, adaptable thinkers and doers through its transformative learning environment, innovative curriculum and diverse global opportunities.

The programme admits students from seven faculties/schools - Arts and Social Sciences; Business; Computing; Design and Environment; Engineering; Science; and Law.

You will be challenged to build upon, or go beyond your majors, by thinking critically and approaching topics from different disciplinary perspectives. This enables you to make connections across disciplines and challenge conventional ways of thinking.

You will attend seminar-style classes, and do 30% of your academic work in USP and 70% in your home faculty/school where you read your majors.

You will flourish in different ways through an enriching residential experience in an organic, self-driven environment that encourages exchange, peer learning and collaboration. This is achieved by living at the USP residential college – Cinnamon College – at University Town, for two or more years.

You will organise or take part in USP International Programmes, which challenge you on issues outside your fields of interest and enhance your global perspective.

USP admissions open every year with NUS’ general admissions and shortlisted applicants will be interviewed. A second USP admission exercise is also considered for Faculty of Science freshmen in the 2nd semester of study.

USP is not a scholarship disbursement programme. You may, however, apply for NUS scholarships or be recipients of other scholarships. There are also financial aid initiatives and scholarships in USP to help you defray the cost of studying and living on campus.

Upon successful completion of USP requirements and an Honours programme, you will graduate with an Honours degree from your faculty/school and receive a certificate of recognition as a University Scholar.

*For more information on USP and application timelines, please visit [www.usp.nus.edu.sg](http://www.usp.nus.edu.sg). You can also email your enquiries to usphelp@nus.edu.sg.*
Study abroad programmes with over 200 overseas partner universities open the door to a global learning experience. You will gain exposure to different cultures and academic environments. Ranging from a few weeks to two years, these programmes allow you to study abroad as part of your undergraduate studies in NUS while paying only home university fees. Courses taken as part of study abroad programmes could earn you modular credits towards fulfilling graduation requirements. 

**Student Exchange Programme**

Students spend one semester or a year at an overseas partner university.

Going on exchange allows you to take modules not taught in NUS.

We have over 200 reputable partner universities. These include: University College Cork; Radboud University; University of Toronto; Colgate University; Cornell University; The University of North Carolina at Chapel Hill; La Trobe University; Chang Gung University; Nagoya University and many more.

**Summer Programme**

Spanning three to eight weeks, these programmes are ideal should you prefer to gain an overseas learning experience outside regular semesters.

Places offered by our partner universities are reserved for NUS Science students only.

Summer programmes allow you to take NUS modules in an overseas setting.

Some overseas universities offering summer programmes include: University of Toronto; The University of North Carolina at Chapel Hill; University of California, Los Angeles; Radboud University; and Hokkaido University.

**Overseas Summer Research Programme**

Students spend eight to 12 weeks in the laboratories of our partner universities or in overseas research institutes. Students from all disciplines can enrol in these programmes.

Some partner universities and research institutes include: University of Cambridge; The University of North Carolina at Chapel Hill; University of Alberta; University of Toronto; University Autónoma de Madrid; King Abdullah University of Science and Technology; Shanghai Jiao Tong University; Zhejiang University; Chang Gung University; and Academia Sinica.

**NUS Overseas Colleges (NOC) Programme**

Selected students will choose to spend three or six months with a high technology startup in Beijing or Shanghai, or six to seven months in Beijing, Shenzhen, Israel, Munich, Lausanne, NOC Singapore or NOC Southeast Asia. For a one-year experience, selected students may opt to go to New York, Silicon Valley, Stockholm or Toronto.

You will gain firsthand insights into the operations of high technology startups and experience the challenges faced by the founders of these companies.

You can enrol in entrepreneurship courses at highly reputable universities like Stanford University; Fudan University; Tsinghua University; Technical University of Munich; and the KTH Royal Institute of Technology.

**Double Degree Programme with the French Grandes Écoles**

The Grandes Écoles are a cluster of world-renowned institutions of higher scientific learning with a history of over 200 years, known for educating France’s technical and management elites.

NUS has set up Double Degree Programmes with six premier French Grandes École:

- CentraleSupélec
- Ecole des Mines de Paris
- Ecole des Ponts ParisTech (École Nationale des Ponts et Chaussées)
- Ecole Polytechnique
- ENSTA ParisTech (École Nationale Supérieure de Techniques Avancées)
- TELECOM ParisTech (École Nationale Supérieure des Télécommunications)
Study Abroad Programmes

Students are selected in the first year from among top engineering, science and computing applicants.

Grandes Écoles place strong emphasis on mathematics and physics curricula in the first year.

You will undergo French language preparation, spend your third and fourth year in a French institution, and return to NUS for your M.Sc. programme.

Upon graduation, you will receive a B.Sc. (Hons) degree, an M.Sc. degree from NUS and a Diplome d’Ingenieur (the equivalent of Masters in France) from a French Grande École.

Joint Degree Programme with The Australian National University (ANU)
This four-year programme combines the Bachelor of Philosophy (Hons) degree of ANU with NUS’ B.Sc. (Hons) degree.

It is only offered to NUS Science students in the University Scholars Programme who are majoring in Chemistry, Mathematics and Physics, and is suitable if you have an interest and aptitude for graduate research work.

Up to six students are accepted into the programme annually.

You will spend three semesters at NUS, followed by three semesters at ANU, before returning to NUS to complete the Honours year.

You will acquire a strong foundation in critical analysis and in-depth perspectives into the principles of each subject, while actively undertaking independent undergraduate research work.

Applications open in September/October each year. Successful students are provisionally admitted to the programme based on academic performance and other relevant qualifications. Official admission into the programme will only take place at the end of the third semester of study.

Joint Degree Programme in Life Sciences with The University of North Carolina at Chapel Hill (UNC-CH)
This four-year programme, offered in collaboration between the Faculty of Science and the College of Arts and Sciences, UNC-CH, leads to a B.Sc. (Hons) in Life Sciences from NUS and a B.Sc. in Biology from UNC-CH.

It offers students from both institutions a unique learning experience encompassing advanced life sciences modules, undergraduate research and exposure to UNC-CH’s exceptional liberal arts education.

NUS students will generally spend Semesters 1 to 4 in NUS, Semesters 5 to 6 in UNC-CH and Semesters 7 to 8 in NUS.

Upon graduation, you will receive a degree jointly validated by NUS and UNC-CH.

Joint Minor Programme with University of Toronto (U of T)
This programme offers two joint minor programmes in either Environmental Biology or Environmental Chemistry with U of T.

You will study advanced courses for one semester at U of T, where you will benefit from their expertise in environmental sciences.

Joint Degree Programme with University of Dundee
The programme is jointly offered by NUS’ B.Sc. (Hons) in Life Sciences and University of Dundee (UoD)’s B.Sc. (Hons) in Biological Sciences/Biomedical Sciences, and equips students with drug discovery and design expertise.

The first of its kind joint Honours programme enables NUS Life Sciences students to complete a full-year research project at UoD in drug discovery and design.

Upon graduation, you will receive a degree jointly validated by NUS and UoD.
Concurrent Degree Programme with The University of Melbourne Doctor of Veterinary Medicine
The programme combines NUS’ B.Sc. in Life Sciences and the Doctor of Veterinary Medicine offered by the Faculty of Veterinary and Agricultural Sciences, The University of Melbourne. It integrates the two degree programmes so that it is possible to accelerate and complete the programme in 5.5 years, instead of the usual seven years.

Students will acquire specialised theoretical, practical and clinical training in veterinary medicine and veterinary science.

For more information on our study abroad programmes, please visit www.science.nus.edu.sg/education/undergraduate/ug-programmes/sap-outgoing. You can also email your enquiries to scisap@nus.edu.sg.
## ADMISSIONS INFORMATION

**Admission Requirements for Students with GCE ‘A’ Level (H1/H2) Qualifications or Equivalent**

For admission to the Faculty of Science, applicants must have good GCE ‘A’ Level (H2) passes (or equivalent) in at least two of these Science subjects: Biology, Chemistry, Computing, Physics and Mathematics/Further Mathematics.

Students admitted to the Faculty of Science will choose their major in July if they meet the prerequisites for that major. Students intending to pursue major courses like Data Science and Analytics, Food Science and Technology, Environmental Studies, or Pharmaceutical Science or Pharmacy, can apply for any of them via the online application form.

<table>

</tbody>
</table>
### Primary Majors Leading to an Honours Degree

- **Life Sciences**
  - Specialisation in Biomedical Science
  - Specialisation in Environmental Biology
  - Specialisation in Molecular and Cell Biology

- **Mathematics**
- **Applied Mathematics**
- **Applied Mathematics**
  - Specialisation in Mathematical Modelling and Data Analytics
  - Specialisation in Operations Research and Financial Mathematics
- **Quantitative Finance**

- **Pharmaceutical Science**

- **Pharmacy** *(Professional programme where application is by direct admission only)*

- **Physics**
- **Physics**
  - Specialisation in Astrophysics
  - Specialisation in Nanophysics
  - Specialisation in Quantum Technologies

- **Statistics**
- **Statistics**
  - Specialisation in Data Science
  - Specialisation in Finance and Business Statistics

### Prerequisites for Students Offering H2 Curriculum or Equivalent

- Two good H2 passes (or equivalent) in Biology or Chemistry or Mathematics/Further Mathematics or Physics

  - Students without H2 pass in Biology or Chemistry may read the relevant bridging modules (i.e. LSM1301 or CM1417 respectively) as entry requirements.

- Good H2 pass (or equivalent) in Mathematics/Further Mathematics

- Very good H2 pass (or equivalent) in Chemistry and a very good H2 pass (or equivalent) in Biology or Physics or Mathematics/Further Mathematics

- Very good H2 passes (or equivalent) in Chemistry and either Biology, Mathematics/Further Mathematics or Physics

- Good H2 passes (or equivalent) in Physics and Mathematics/Further Mathematics

- Good H2 pass (or equivalent) in Mathematics/Further Mathematics

### Interdisciplinary Degree Programme

- **Bachelor of Environmental Studies**
  - Specialisation in Environmental Biology

### Prerequisites for Students Offering H2 Curriculum or Equivalent

- Good H1 pass (or equivalent) in Mathematics and good H2 pass (or equivalent) in Biology or Chemistry

---

**NOTE**

- a) Admission to the Faculty of Science does not automatically qualify a student to choose these majors as there will be additional departmental selection due to limited places.
- b) # These are strict four-year programmes. Students in other majors can graduate with a Bachelor of Science (B.Sc.) degree after three years.
- c) Specialisations are awarded only with a B.Sc. (Hons) degree.
Courses Beyond Primary Major

The Faculty of Science offers a flexible curriculum, which allows students who wish to enrich and broaden their educational experiences, to choose other courses and programmes beyond their primary major course. Students may do a double degree (two degrees with two full majors), choose a double major (one primary and one second major) and/or minor programmes within and outside the Faculty.

**ADVANCED PLACEMENT CREDITS (APCs)**

APCs are given to diploma holders of approved programmes from the five polytechnics in Singapore. Such students admitted to a four-year degree programme may be granted APCs in relevant modules for up to a maximum of 40 modular credits (MCs), as follows:

**Auto-granted MCs**

(i) 20 MCs from Unrestricted Elective Modules

**Performance-based MCs**

(ii) Up to 20 MCs from programme requirements may be granted based on performance in advanced placement tests and/or interviews set by the department offering the module.

**Computation of Admission Score for Academic Year 2019/2020**

(1) Polytechnic results 80%  
(2) Singapore-Cambridge GCE ‘O’ Level results 20%
