

## Advanced Placement Credit Test 2008 Module Template

1.	<b>Module Code:</b>	ST1131
2.	<b>Module Title:</b>	Introduction to Statistics
3.	<b>Modular Credits [MC]:</b>	4
4.	<b>Module Description:</b>	<p>This module introduces students to the basic concepts and the methods of statistics. A computer package is used to enhance the effect of learning and to enable students to analyze complicated data.</p>
5.	<b>Module Content/Syllabus:</b> (to include topics to be covered)	<p><b>1. Descriptive Statistics</b></p> <ul style="list-style-type: none"> <li>• Types of data</li> <li>• Graphical presentation of data</li> <li>• Numerical summaries of data</li> </ul> <p><b>2. Gathering Data</b></p> <ul style="list-style-type: none"> <li>• Good ways and poor ways to sample</li> <li>• Good ways and poor ways to experiment</li> <li>• Other ways to perform experimental and observational studies</li> </ul> <p><b>3. Probability</b></p> <ul style="list-style-type: none"> <li>• Randomness</li> <li>• Find conditional probabilities</li> <li>• Applying the probability rules</li> </ul> <p><b>4. Probability Distributions</b></p> <ul style="list-style-type: none"> <li>• Discrete probability distributions</li> <li>• Continuous probability distributions</li> <li>• Sampling distributions</li> </ul> <p><b>5. Statistical Inferences</b></p> <ul style="list-style-type: none"> <li>• Confidence intervals</li> <li>• Significance tests about hypotheses</li> <li>• Comparing two groups</li> </ul> <p><b>6. Association</b></p> <ul style="list-style-type: none"> <li>• Association between two categorical variables</li> <li>• Association between two quantitative variables</li> <li>• Inferences about the association</li> </ul>

6.	<b>Tutorial/Assignment Sample Questions</b> (you may attach the Qns as an appendix to this document)	Nil																		
7.	<b>Recommended Textbooks/Readings:</b>	1. Alan Agresti and Christine A. Franklin. <i>Statistics: The Art and Science of Learning From Data</i> . (ISBN: 0130083690). 2. David S. Moore. <i>Statistics: Concepts and Controversies</i> . (ISBN: 0716740087) 3. Moore, D.S. and McCabe, G.P. <i>Introduction to the Practice of Statistics</i> . (ISBN: 071676282X)																		
8.	<b>Exam Format:</b> (please indicate the duration and assessment format, e.g. MCQ, Short-answer Qns, Essay Qns)	(i) Duration: 2 hours (ii) Assessment Format: 4 questions																		
9.	<b>Sample of Exam Questions:</b> (you may attach the Qns as an appendix to this document)	a) Let $X$ = number of days in the past week in which a randomly selected person felt anxious and tense. According to a recent General Social Survey, the probabilities for the potential values of $X$ for adult Americans are approximately:  <table style="margin-left: auto; margin-right: auto;"> <tr> <td style="padding-right: 10px;"><math>X</math></td> <td style="padding-right: 10px;">0</td> <td style="padding-right: 10px;">1</td> <td style="padding-right: 10px;">2</td> <td style="padding-right: 10px;">3</td> <td style="padding-right: 10px;">4</td> <td style="padding-right: 10px;">5</td> <td style="padding-right: 10px;">6</td> <td style="padding-right: 10px;">7</td> </tr> <tr> <td><math>P(X)</math></td> <td>0.28</td> <td>0.20</td> <td>0.15</td> <td>0.11</td> <td>0.07</td> <td>0.07</td> <td>0.02</td> <td>0.10</td> </tr> </table> Find the mean of this probability distribution. Interpret.  b) Serum cholesterol is an important risk factor for coronary disease. The level of serum cholesterol is approximately normally distributed with a mean of 219 mg/dL and a standard deviation of 50mg/dL. If the clinically desirable range for serum cholesterol is $< 200$ mg/dL and serum cholesterol level of over 250mg/dL indicates a high-enough risk for heart disease to warrant treatment, what is the probability that a randomly selected person will have a borderline high serum cholesterol level, that is, $>200$ , but $< 250$ mg/dL?  c) To estimate the mean acreage of ranches in Alberta, Canada a researcher plans to obtain the acreage for a random sample of 64 farms. Results from an earlier study suggest that 800 acres is a reasonable guess for the standard deviation of ranch size.	$X$	0	1	2	3	4	5	6	7	$P(X)$	0.28	0.20	0.15	0.11	0.07	0.07	0.02	0.10
$X$	0	1	2	3	4	5	6	7												
$P(X)$	0.28	0.20	0.15	0.11	0.07	0.07	0.02	0.10												

		<ul style="list-style-type: none"><li>i. Find the probability that the sample mean acreage fall within 100 acres of the population mean acreage.</li><li>ii. If the researcher can increase the sample size above 64, will the probability that the sample mean falls within 100 acres of the population mean increase or decrease? Why?</li></ul>
